CHAIR & TABLE SIZING GUIDE

SUGGESTIONS ARE FOR STUDENTS OF AVERAGE HEIGHT AND WEIGHT.

Seat heights should be measured by calculating the distance from the floor to the top curve of the seat. Measurements should not be taken at the seat's side or rear. If at all possible, measure the heights of a representative sample of students in each grade prior to each school year. This will help you more accurately determine your specific seating needs as time goes by.

CHAIR SIZE GUIDE

Seat Height	12"	14"	16"	18"

TABLE & CHAIR MEASUREMENTS

HEIGHT #1: SITTING POPLITEAL

Defined: Height from the floor to the back of the knee while seated. To provide correct ergonomic seating, the child should be sitting comfortably with feet flat on the floor and knees bent at right angles. The correct seat height will be the measurement from the floor to the bend right behind the child's knees.

HEIGHT #2: TABLE CLEARANCE

Defined: Height from the top of the leg to the bottom of the table. Usually, tabletops should be 8 inches from the top of a child's thigh, although this height might be slightly less for toddlers. When deciding on a table height, you should take into consideration the child's overall size and build. For example, a short-waisted child will be more comfortable at a shorter table in relation to his or her seat height.
